## INTRODUCTION

The *Current Bibliography of Epidemiology (CuBE)* was developed by the National Library of Medicine with the professional advice and assistance of the Epidemiology Section, American Public Health Association. Its purpose is to provide a comprehensive and continuing index to the current periodical medical literature for practitioners and investigators in community medicine and others concerned with the etiology, prevention, and control of disease. Each volume consists of 12 monthly issues. An annual cumulation is published after the end of the year.

The bibliography is divided into two parts, each arranged in alphabetical order:

**SECTION 1, SELECTED SUBJECT HEADINGS.** Includes the current references related to some 200 topics (from Accident Prevention and Air Pollution to Water Supply and Zoonoses) comprising the varied interests of administrators, investigators and teachers. The complete list is overleaf.

**SECTION 2, DISEASES, ORGANISMS, VACCINES.** Includes the current references related to the etiology, prevention and control of specific diseases. These are listed under appropriate subheads, as follows:

For each *disease*, the subheads are occurrence, mortality, etiology, familial & genetic, prevention & control.

For each *organism*, the subheads are pathogenicity, immunology.

For each *vaccine*, and for a few viruses and bacteria under active investigation, a more extensive list of subheads is used.

For users of this bibliography who are not familiar with indexing practices in *Index Medicus*, the following notes may be useful:

Translated titles are in parentheses, and the original language is specified.

For review articles, the number of references is shown.

A principal indexing rule is to list an article under the most specific subject heading applicable. Thus an article dealing with mumps vaccine will be listed under that subject heading in Section 2, but not under viral vaccines or vaccination. The latter headings are reserved for articles which are not specific to a single vaccine. Articles may be listed under more than one subject heading and within a subject heading under several subheads.

Each issue of *CuBE* is prepared from the MEDLARS tapes for *Index Medicus (IM)* of a corresponding date. The limited scope of *CuBE* makes it possible to provide more extensive coverage in its special field while omitting unwanted material. (Comparison of coverage for topics in community medicine in this bibliography and in *IM* are contained in an article in the *American Journal of Epidemiology*, January 1969.) The format for citations is the same in both publications. Since each reference cited here appears at least once in *IM*, a separate Author Index is not required. Full titles for each of the 2,250 journals indexed for *Index Medicus* and the latest revision of the subject heading list (*Medical Subject Headings*) are published each year in the January issue of *IM*.

The National Library of Medicine makes provision for annual review of subject headings in order to keep abreast of changes in medical research and practice. Users of this bibliography are encouraged to offer suggestions to:

## PITUITARY NEOPLASMS

### ETIOLOGY

Synergism between neutron radiation and diethylstilbestrol in the production of mammary adenocarcinomas in the rat. Shellabarger CJ, et al. *Cancer Res* 36(3):1019-22, Mar 76

## PITYRIASIS

### ETIOLOGY

Letter: Vesicular pityriasis rosea. Garcia RL. *Arch Dermatol* 112(3):410, Mar 76

## PLACENTA ACCRETA

### OCCURRENCE

Congenital anomalies among children born of mothers receiving chemotherapy for gestational trophoblastic neoplasms. Ross GT. *Cancer* 37(2 Suppl):1043-7, Feb 76

## PLACENTA DISORDERS

### ETIOLOGY

Placental morphometric and morphologic alterations in maternal undernutrition. Murthy LS, et al. *Am J Obstet Gynecol* 124(6):641-6, 15 Mar 76

### FAMILIAL & GENETIC

A cytogenetic study of human spontaneous abortions using banding techniques. Cressy MR, et al. *Hum Genet* 31(2):177-96, 29 Feb 76

## PLAGUE

### PREVENTION & CONTROL

## NATIONAL LIBRARY OF MEDICINE RECURRING BIBLIOGRAPHIES

*The National Library of Medicine, through its computer-based MEDLARS (Medical Literature Analysis and Retrieval System), periodically produces lists of citations to journal articles in specialized biomedical fields. Most of these lists, termed "Recurring Bibliographies," are printed and distributed by nonprofit professional organizations and other government agencies with whom the Library cooperates.*

**Bibliography on Medical Education** is included in the *Journal of Medical Education*, published monthly by the Association of American Medical Colleges, 1 Dupont Circle, Washington, D.C. 20036.

**Cerebrovascular Bibliography** is prepared quarterly under the auspices of the Joint Council Subcommittee on Cerebrovascular Disease, National Institute of Neurological and Communicative Disorders and Stroke and the National Heart and Lung Institute, National Institutes of Health, Bethesda, Maryland 20014.

**Hemostasis and Thrombosis: A Bibliography**, is distributed monthly by the National Heart and Lung Institute, National Institutes of Health, Bethesda, Maryland 20014.

**Index of Rheumatology**, an annual, is available from the American Rheumatism Association Section of The Arthritis Foundation, 1212 Avenue of the Americas, New York, New York 10036.
